1 Method used

During December 2014, an on-line questionnaire on the learners' needs concerning the tutorial support needed, was distributed from the consortium partners to students of previous or current e-learning courses. Since 20/12/2014, **267** persons responded, 119 female and 148 male. The learners that replied were from Austria (102), Italy (71), Greece (57), Germany(10), Romania(7), Serbia (7), Switzerland (2), Ukraine (2), Argentina (1), Czech Republik (1) and 8 people didn't give their country of origin. All the replies were combined and the results are following.

1.2 Used techniques

The questionnaire was provided by Google.doc. The consortium members informed people from the target group about the questionnaire.

2 Results

The vast majority of the people that participated in this survey believe that a direct contact to the instructor of the course, using a hotline is very important (table I and figure A).

They also strongly believe that it is important to be provided with standards for the instructors response and availability along with instructional activities for achieving learning objectives.(tables II & III, figures B & C).

Most of them (66%) prefer using forum as a communication tool to contact tutors or instructors, rather than Telephone, Skype or Chat (table IV and figure D).

More than 55% of the people asked prefer to have time structured assignments available only at a certain time according to the course content and receive a regular summary of the taken lectures and exercises (tables VI & VII and figures F & G)

Concerning the time they believe that an assignment should be available, more than 40% prefer no time limit, but more a lot of them 2 or 3 weeks is OK (table VIII & figure H).

60% of the people responded that they would you like to have the educational material in interactive form rather than text or in other form (table IX & figure I).

Also, the great majority (more than 80%) consider important or very important it to have educational goals stated and the educational materials in a multimedia form (tables X & XI, figures J & K). About the same percentage would you like to have the possibility of self-evaluating their own progress (table XII and figure L).

Finally, the great majority of the people asked, believe that a visualisation of their progress inside the course (more than 85%) and the comparisons of the effort of all participants anonymously (more than 65%) is important.
